CONTENTS

Volume 36, Issue Nos. 1–8 (2001)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 15 May

An adaptive Lagrangian boundary element approach for three-dimensional transient free-surface Stokes flow as applied to extrusion, thermoforming and rheometry: R. E. Khayat and D. Genouvrier 1

High resolution flux-difference-splitting scheme on adaptive grid for open-channel flows: A. K. Jha, J. Akiyama and M. Ura 35

Three-dimensional numerical simulation of Marangoni instabilities in liquid bridges: influence of geometrical aspect ratio: M. Lappa, R. Savino and R. Monti 53

Numerical modelling of gas-solid fluidized beds using the two-fluid approach: C. C. Pain, S. Mansoorzaheh, C. R. E. de Oliveira and A. J. H. Goddard 91

Issue No. 2, 30 May

Computing singular solutions of the Navier-Stokes equations with the Chebyshev-collocation method: O. Botella and Roger Peyret 125

Numerical study of flows with multiple free surfaces: P. K. Mohapatra, S. Murty Bhallamudi and V. Eswaran 165

A first-order volume of fluid convection model in three-dimensional space: S.-O. Kim, Y. Sim and E.-K. Kim 185

Numerical simulation of tidal bore in Hangzhou Gulf and Qiantangjiang: M. D. Su, X. Xu, J. L. Zhu and Y. C. Hon 205

Issue No. 3, 15 June

Lung effect on the hemodynamics in pulmonary artery: S. F. Tsai, T. W. H. Sheu and T. M. Chang 249

Finite element simulation of fully non-linear interaction between vertical cylinders and steep waves. Part 1 Methodology and numerical procedure: Q. W. Ma, G. X. Wu and R. Eatock Taylor 265

Finite element simulations of fully non-linear interaction between vertical cylinders and steep waves. Part 2 Numerical results and validation: Q. W. Ma, G. X. Wu and R. Eatock Taylor 287

Large-scale eigenvalue calculations for stability analysis of steady flows on massively parallel computers: R. B. Lehoucq and A. G. Salinger 309

Remedies for artificial diapycnal mixing in a σ co-ordinated model of Tokyo Bay: A. Kaneko 329

Advection upwinding splitting method to solve a compressible two-fluid model: Yang-Yao Niu 351

Issue No. 4, 30 June

A level set approach for computing solutions to inviscid compressible flow with moving solid boundary using fixed Cartesian grids: M.-H. Chung 373

A new multi-domain/multi-resolution method for large-eddy simulation: P. Quéméré, P. Sagaut and V. Couaillier 391

Fourier analysis of several finite difference schemes for the one-dimensional unsteady convection–diffusion equation: J. M. C. Pereira and J. C. F. Pereira 417

A stabilized incremental projection scheme for the incompressible Navier–Stokes equations: P. D. Minev 441

Simulation of non-linear free surface motions in a cylindrical domain using a Chebyshev–Fourier spectral collocation method: M. J. Chern, A. G. L. Borthwick and R. Eatock Taylor 465

Issue No. 5, 15 July

A parallel pressure implicit splitting of operators algorithm applied to flows at all speeds: N. W. Bressloff 497

A multiblock/multilevel mesh refinement procedure for CFD computations: R. Teigland and I. K. Eliassen 519

Viscoelastic simulations of stick-slip and die-swell flows: V. Ngamaramvaranggul and M. F. Webster 539

Numerical computations of supersonic inlet flow: S. S. Gokhale and V. R. Kumar 597

Issue No. 6, 30 July

Incompressible flows with combustion simulated by a preconditioning method using multigrid acceleration and MUSCL reconstruction: V. Bellucci and C. Bruno 619

A convergence study of two ocean models applied to a density driven flow: H. Avlesen, J. Berntsen and T. O. Espelid 639

Edge-based finite element method for shallow water equations: F. L. B. Ribeiro, A. C. Galeão and L. Landau 659

High order Cartesian grid method for calculation of incompressible turbulent flows: J. Gullbrand, X. S. Bai and L. Fuchs 687

Evaluation of erosion in a two-way coupled fluid-particle system: Yang-Yao Niu 711

Issue No. 7, 15 August

Performance of algebraic multi-grid solvers based on unsmoothed and smoothed aggregation schemes: R. Webster 743

Analysis of super compact finite difference method and application to simulation of vortex–shock interaction: Fu Dexun and Ma Yanwen 773

Towards a transparent boundary condition for compressible Navier–Stokes equations: C. H. Bruneau and E. Creusé 807

An assessment of a parallel, finite element method for three-dimensional, moving-boundary flows driven by capillarity for simulation of viscous sintering: Hua Zhou and J. J. Derby 841

Issue No. 8, 30 August

Vortex surface method: some numerical problems of the potential calculation: T. Belamri, F. Bakir, S. Kouidri and R. Rey 867

Finite volume multigrid method of the planar contraction flow of a viscoelastic fluid: H. Al Moatssime, D. Esselaoui, A. Hakim and S. Raghay 885

The design of improved smoothing operators for finite volume flow solvers on unstructured meshes: B. de Foy and W. Dawes 903

An implicit time-marching algorithm for shallow water models based on the generalized wave continuity equation: K. M. Dresback and R. L. Kolar 925

Numerical simulation of the flow field in the vicinity of an axial flow fan: C. J. Meyer and D. G. Kröger 947

On estimation of entrance boundary parameters from downstream measurements using adjoint approach: A. K. Alekseev 971
